St Paul's English High School

04/2006 - 05/2016

TEAM PROJECTS

Showroom Management System (2020 - Present)

- Language : C# DataBase : Microsoft SQL server
- Software For managing the import export of vehicles storing all relevant information.
- Semester 5

Access Data From Web And Perform Calculations using Multi-Threading (2020 - Present)

- Language : Python
- A Python Script to get data from dozens of Website Simultaneously. Multi Threading was used for this purpose. Data was then parsed and stored in different files in subfolders upon some conditions. The second section of code would retrieve the data over multi threading from the files and perform multiple calculations and comparisons and Display the final result. Highly time efficient code was made.
- Semester : 5

Graph Representation Of Words (2019)

- Language : C++
- A highly time and storage efficient program to store a large paragraph of words in such an order that each word takes only one memory despite of infinite repetition.
- Semester : 3

Fast Nukes Point Management - Version 2 (2019)

- Language : C++
- An Updated Version of the previous project was made on the demand of the administration. This version could manage and edit the route details with in the application. Searching over areas and time management was updated. A SQL Server database was integrated to manage these information
- Semester : 2

Fast Nukes Point Management (2018)

- Language : C
- A Console Based Local Application that efficiently manages the Point Routes . Our idea was based on the Fast Nukes Point system and it's registration process. We managed to store up all the routes for all point , it's registration process depending on seat number and various other functionality
- Semester : 1
